ANCILLARY COMPONENTS Exclusive to Roadstone / Formpave Aquaflow system

Inbitex Geotextile non-woven geotextile is used for separation, filtration and pollution control.

SC Intergrid sub-base stabilisation grid improves structural strength, increases design life and reduces construction costs.

SC Membrane This impermeable membrane allows the storage of collecting storm water. Used for the Aquaflow attenuation system it can be welded or taped dependent on the application. A higher grade SC Membrane GT can be specified when contamination is present.

SC Findrain This drainage component allows efficient and high flow removal of storm water from the Roadstone Aquaflow system. Wrapped in Inbitex Geotextile which provides further filtration and cleansing.

Aquaflow Distribution Tanks Voided crates that are extremely strong structurally and are wrapped in Inbitex

Geotextile, which provides filtration and cleansing. Allows the collection of impermeable surface water catchment, such as roofs to the Aquaflow system.
