

# Ultracolour

## Colour Asphalt & Surface Treatments

Ultracolour is a new range of vivid coloured asphalts that will enhance the design and experience of an outdoor space. Ultracolour has many uses, from cycleways, playgrounds and driveways to bus lanes and highlighting areas of changes in road use.

Ultracolour uses high quality coloured aggregates and pigments in conjunction with a high performance clear binder, in order to produce vivid coloured asphalt. Ultracolour offers far brighter colours than conventional asphalts. It is also highly durable, delivering lasting performance, even on highly trafficked roads.

Ultracolour offers architects, urban planners and landscape designers an alternative way to define space in a way that improves safety, visibility, navigation and aesthetics.

## Key Features & Benefits

Durable

Low maintenance

Fast installation

Enhanced safety

Long lasting colours

Versatile material

Available in a range of colours

A range of end uses, playgrounds, SUDs, demarcation

Made from local materials to the highest standards

100% Recyclable

## Applications
